

Master of Science (M.Sc.)

„Business Informatics“

University of Mannheim

– Module catalog –

Appendix

Academic Year

HWS 2024/ FSS 2025

Die folgenden Veranstaltungen wurden nach Veröffentlichung des Modulkatalogs dem Kursprogramm hinzugefügt.

1. Overview

C. Specialization Courses

Module no.	Name of Module	Offered	Language	ECTS	Page
IE 650	Knowledge Graphs	HWS	E	6	3
IE 695	Reinforcement Learning	HWS	E	6	7

D. Projects and Seminars

iii. Seminars

Module no.	Name of Module	Offered	Language	ECTS	Page
CS 724	Risks and Opportunities of AI	Irregular	E	4	9

2. Detailed descriptions

C. Specialization Courses

IE 650	Knowledge Graphs
Form of module	Lecture
Type of module	Specialization course
Level	Master
ECTS	6
Workload	Hours per semester present at university: 56 h (4 SWS)
	Self-study: 124 h per semester <ul style="list-style-type: none">• 82 h: pre and post lecture studying and revision• 42 h: examination preparation
Prerequisites	Java or Python programming skills
Aim of module	<ul style="list-style-type: none">• The Role of knowledge graphs in the AI landscape• Semantic Web and its representation languages• Labeled property graphs• Query languages for knowledge graphs• Knowledge modeling and ontologies• Logical reasoning with knowledge graphs• Machine learning with knowledge graphs and knowledge graph embeddings

Learning outcomes and qualification goals	<p>Expertise:</p> <p>The participants of this course learn about principles and applications of knowledge graphs. They become familiar with their technical foundations such as representation and query languages, or logical inference. After taking this course, the students will be aware of the problems and benefits of knowledge graph technologies in the context of tasks such as knowledge management, information search and data integration, and they will be capable of judging the applicability of these technologies for addressing practical challenges.</p> <p>(MK1, MK2)</p>
	<p>Methodological competence:</p> <p>The participants learn how to design and implement AI systems based on knowledge graphs. They are able to use standardized modeling languages for building knowledge representations, and to query these models by means of languages such as SPARQL.</p> <p>(MF3)</p>
	<p>Personal competence:</p> <p>By jointly building a knowledge graph-based application, the students learn how to effectively work in teams. They improve upon their presentation skills by showing the outcomes of their projects to the other participants of the course.</p> <p>(MKO1, MKO3)</p>
Media	Lecture slides and exercise sheets will be available online
Literature	<ul style="list-style-type: none"> • Pascal Hitzler, Markus Krötzsch and Sebastian Rudolph, Foundations of Semantic Web Technologies, Chapman & Hall/CRC, 2009 • Allemang and Hendler (2008): Semantic Web for the Working Ontologist. Verlag Morgan Kaufmann.

	<ul style="list-style-type: none"> • Antoniou and van Harmelen (2004): A Semantic Web Primer. MIT Press. • Fensel et al. (2020): Knowledge Graphs: Methodology, Tools and Selected Use Cases. Springer. • Kerjwal et al. (2021): Knowledge Graphs: Fundamentals, Techniques, and Applications. MIT Press.
Methods	<p>The course participants will take part in theoretical and practical exercises, the solutions of which are discussed in the tutorials. At the end of the course, they get the opportunity to apply their knowledge in a team project. Each student team will design and implement a semantic web application, and subsequently present the results to the other students. Besides the exercises, regular presentations including references to relevant course materials and recommended readings will be given by the lecturer. The lecturer as well as the tutors offer individual help and consulting to the participants of the course.</p>
Form of assessment	Written examination
Admission requirements for assessment	Project report and oral presentation
Duration of assessment	60 minutes
Language	English
Offering	Fall semester
Lecturer	Dr. Sven Hertling
Person in charge	Prof. Dr. Heiko Paulheim
Duration of module	1 semester
Further modules	-
Range of application	M.Sc. Wirtschaftsinformatik, M.Sc. Mannheim Master in Data Science, M.Sc Mannheim Master in Social Data Science, Lehramt Informatik

Semester	1 st /2 nd /3 rd semester
----------	--

IE 695	Reinforcement Learning
Form of module	Lecture with Exercise (partially online)
Type of module	Specialization Course
Level	Master
ECTS	6
Workload	Hours per semester present: 56 (4 SWS)
	Self-study: 98h (70h lectures/exercises, 28h exam preparation)
Prerequisites	Machine Learning / Computer Vision /Generative Computer Vision Models course, theoretical and practical knowledge of neural networks
Aim of module	<ul style="list-style-type: none"> - Basic concepts of reinforcement learning: MDP, policies, on-policy, off-policy learning - Classical tabular reinforcement learning, DP, Policy Iteration, Q-Learning, SARSA, Monte-Carlo methods - Function approximation for reinforcement learning - Policy gradient methods
Learning outcomes and qualification goals	<p>Expertise:</p> <p>After the course students will understand classical concepts of reinforcement learning as well as state of the art algorithms.</p>
	<p>Methodological competence:</p> <p>The students are able to understand and customize popular reinforcement learning algorithms, choose the right setting for their problem and train agents to perform well in environments with which they interact.</p>

	<p>Personal competence:</p> <p>The course trains abstract thinking and the ability to formally model application scenarios. By solving assigned exercises independently, the transfer of the learned material to related questions is promoted.</p>
Media	Exercise sheets and lecture slides available online, blackboard
Literature	- Sutton & Barto: Reinforcement learning: an introduction, 2018
Methods	Lecture, exercises every two weeks, book studies
Form of assessment	Written or oral examination
Admission requirements for assessment	-
Duration of assessment	Written: 90 min. Oral: 25 min.
Language	English
Offering	HWS
Lecturer	Prof. Dr.-Ing. Margret Keuper
Person in charge	Prof. Dr.-Ing. Margret Keuper
Duration of module	1 Semester
Further modules	
Range of application	M. Sc. Business Informatics, M. Sc. Data Science, Lehramt Informatik
Semester	1./2./3. Semester

CS 724	Risks and opportunities of AI
Form of Module	Seminar
Type of Module	Seminar
Level	Master
ECTS	4
Workload	120 hours per semester
Prerequisites	<p>-basic knowledge of different AI systems (knowledge-based, machine learning, generative AI)</p> <p>- basic knowledge of scientific research methodology is highly recommended</p>
Aim of module	<p>Students are expected to crystallize their understanding of the seminar topics into a comprehensive seminar paper. They can select one of two tasks:</p> <ol style="list-style-type: none"> 1. Role-playing game seminar using an LLM (Task A): <ul style="list-style-type: none"> ○ Create a script for a role-playing game seminar that uses a large language model (LLM). ○ Critically assess the script, addressing what worked well, what went wrong, and areas for improvement. 2. Jailbreaking/red-Teaming an LLM (Task B): <ul style="list-style-type: none"> ○ Conduct a red-teaming exercise to evaluate the potential consequences of an LLM on a specific topic. ○ Summarize the experience, focusing on what worked well, what failed, and why. <p>Paper requirements:</p> <p>The seminar paper must:</p> <ul style="list-style-type: none"> • Include a brief survey of the chosen topic and explain its importance. • Present open questions related to the topic and describe how these were addressed using the chosen tool (role-playing or red-teaming). • Provide a critical discussion of what worked, what did not, and how the process could be improved. • Conclude with a summary and proposals for future work.

Learning Outcomes and Qualification Goals	Expertise: Students will acquire a deep understanding of the research topic. They are expected to describe and summarize the topic in depth in their own words, as well as to judge the contribution of the research papers to ongoing research.
	Methodological competence: Students will learn to find and analyze relevant literature for their topic; to write a well-structured scientific paper; and to present their results. They will also build their awareness of the need to avoid plagiarism.
	Personal qualification: This seminar will be offered together with colleagues in Toulouse and Sofia as a signature course as part of Engage.EU.
Media	Scientific papers; videos, websites
Literature	<p>Voeneky, S., Kellmeyer, P., Mueller, O., & Burgard, W. (Eds.). (2022). The Cambridge Handbook of Responsible Artificial Intelligence: Interdisciplinary Perspectives. Teaching and Learning Methods	Digital live sessions
Form of Assessment	Seminar paper
Admission requirements for assessment	Bachelor degree
Duration of Assessment	N/A
Language	English
Offering	
Lecturers	Prof. Dr. Simone Ponzetto, Prof. Dr. Philipp Kellmeyer
Person in charge	Prof. Dr. Simone Ponzetto, Prof. Dr. Philipp Kellmeyer

Duration of module	1 semester
Further modules	-
Range of Application	M. Sc. Wirtschaftsinformatik, M.Sc. Mannheim Master in Data Science, Lehramt für Gymnasien
Semester	3 rd or 4 th semester
